Let's Start!

How to Cope with IT Negotiations

Learning Outcome:

Understand information about people's backgrounds in spoken or written documents.

Participate in the improvement of IT contracts, establishing technical clauses that respond to the needs of the negotiating agents, based on current laws on contracting.

Ask your partner:

- Who do you think a company should put in charge of an IT negotiation?
- How do you think a company might be affected after the application of new technological changes?

Can Do Statements:

- I can list some strategies to cope with technology negotiation.
- I can talk about characteristics for strategies to cope with technology negotiation.
- I can talk about technology negotiation that affects the organizational structure of a company.

Let's Explore!

IT negotiation strategies

Instructions: Read the text below.

Technology negotiations abound with miscommunication and disagreement due to their extended complexity. If negotiators make assumptions or try to foresee what the future of technology products will be like, they may find some problems in communication. So, communication errors are supposed to be avoided if some practical rules are agreed upon before the negotiation. By doing so, the probabilities to reach an agreement that meets the demands and needs for both parts, will increase. In addition to this, it is a good idea for companies to assign different people to be concerned about specific goals the company intend to achieve. If a goal conflicts with another, it will be necessary to assess the situation carefully so that there can be mutual gain.

Negotiators who use ambiguity as a negotiation tool seem to reap more benefits from a deal. Having that in mind, if it's in all negotiators' interests to learn about all the technological aspects of the product that is being communed about, an important investment of time will be needed. Additionally, even if a technical adviser is to be brought up the discussion table, all parts involved are supposed to have a practical idea of the technical principles, the pros and cons of different options, and at least a rough idea or estimate of the obstacles that the technological implementation might arise.

Finally, an important outcome of an IT negotiation that managers have to deal with is how the organizational structure is affected. Most IT agreements are supposed to require an organizational strategic realignment; therefore, it'll need to be approached in three steps. First, confer in advance with those who might be affected by the changes; second, heed and grant them an opinion at the end of negotiations; and third, be realistic about the promises that are made at the negotiation.

Let's Practice!

Strategies for a Good Technology Negotiation

Instructions: Select all the correct answers.

1. Which of the following are good strategies or actions to use in a technology negotiation?
 - a. We are supposed to have people from different areas of the company.**
 - b. We are supposed to receive the help of a technical adviser.**
 - c. We are supposed to heed and grant an opinion to whose jobs and charges could be changed.
 - d. We are supposed to know the pros and cons of the negotiation.**
 - e. We are supposed to use ambiguity as a tool to reap more benefits in a long term.**
 - f. We are supposed to be realistic about promises.

Let's Practice!

Changes in Our Organizational Structure.

Instructions: Read the dialogue/ text/sentences. Type in the missing words.

Use: must commune / agree upon / heed / will be abounding / will reap.

1. If there are changes, we _____ with the people who will be in responsibility of those changes.
2. If a technology negotiation is approved, there _____ changes in the company.
3. It is important to _____ any opinion of someone whose charges will change due to the negotiation.
4. We will have to _____ the different elements in the negotiation if we want be successful.
5. After a negotiation, if the changes in the structure are well done, the company _____ many profits.

Extension Activity

The three strategies in a negotiation.

Instructions: Complete the following steps. Fill in the Self-Assessment.

- Find a software or application you think would be useful for a company you have worked, or that is in your area.
- Describe the strategies that the company is supposed to use during the negotiation.
- Explain the possible changes that the company is supposed to apply in their organizational structure.
- Create a chart showing the information and compare it with your partners.

Self-Assessment

Yes No

- I find a software or application that can be useful in a company. ☐ ☐
- I describe the strategies the company could use during the negotiation. ☐ ☐
- I explain the changes in the organizational structure that software would generate. ☐ ☐
- I create a chart and compare my work with my partners. ☐ ☐

Target Words

- **abound** (verb): to exist in a huge amount.
e.g. Technology negotiations are abounding of miscommunication and disagreement due to their extended complexity.
- **agree upon** (verb): to come to an agreement.
e.g. Communication errors are supposed to be avoided if some practical rules are agreed upon before the negotiation.
- **mutual gain** (expression): when both parties are equally benefited.
e.g. It will be necessary to assess the situation carefully so that there can be mutual gain.
- **reap** (verb): to obtain as a result.
e.g. Negotiators who use ambiguity as a negotiation tool seem to reap more benefits from a deal.
- **commune** (verb): to talk with someone.
e.g. If it's in all negotiators' interests to be learned about all the technological aspects of the product that is being communed about, an important investment of time will be needed.
- **heed** (verb): to give special attention to.
e.g. Heed and grant them an opinion at the end of negotiations.

Learning Points

Be Supposed to in Affirmative Statements

When we want to express that something is expected or required from someone or something, we can use the structure **be supposed to**.

Be supposed to in its present simple form is used to say that something is expected or required to happen.

Take a look at the following examples:

Subject + am/is/are + supposed to + verb base form + complement

*IT negotiations **are supposed to facilitate** the acquisition of new technology.*

*An external consultant **is supposed to interpret** contractual terms in a more objective way.*

Examples

- *All parts involved are supposed to have a practical idea of the technical principles.*
- *Most IT agreements are supposed to require an organizational strategy realignment.*
- *Communication errors are supposed to be avoided if some practical rules are agreed upon before the negotiation.*

First Conditional

The **first conditional** is used to talk about real possibilities in the present or in the future.

Conditionals are divided into two statements: an **if statement** and a **result statement**.

In the case of the **first conditional**, the **if statement** is stated in the **present simple** tense and the **result** in the **simple future** tense:

If statement	Result statement
IF the IT expert tries to meet the company's interests,	It will be beneficial for all of us.

Examples

- *If a goal conflicts with another, it will be necessary to assess the situation carefully so that there can be mutual gain.*
- *If it's in all negotiators' interests to be learned about all the technological aspects of the product that is being communed, an important investment of time will be needed.*
