Let's Start!

What could go wrong with cloud computing services?

Learning Outcome:

Understand information about people's backgrounds in spoken or written documents.

Interpret the IT needs assessment, to determine the required technology to manage information, according to the rules and protocols established by the company.

Ask your partner:

- Have you or someone you know ever used cloud computing services? What advantages and disadvantages do you think it has?
- Should insurance for cloud computing services be different from insurance for traditional computing services? Why?

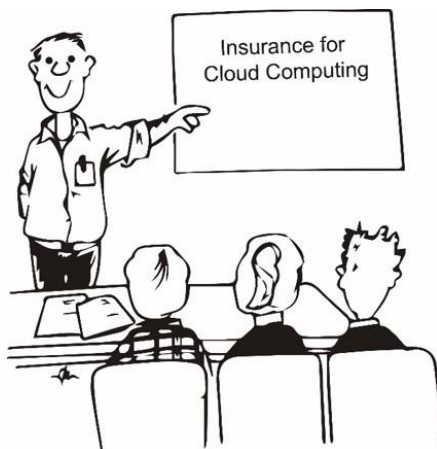

Can Do Statements:

- I can discuss things that can go wrong with cloud computing services.
- I can talk about the importance of insurance when using cloud computing services.
- I can mention ideas about cloud specific insurance.

Let's Explore!

Sarah asks her professor about insurance for cloud computing services.

Instructions: Read the text below.

Professor: Nowadays, cloud services are becoming increasingly popular in businesses due to the massive cost savings in hardware. There are, however, many things that can go wrong with cloud computing services. Sarah, can you mention some of them?

Sarah: Of course. I believe the most common one is the interruption of service because of a cloud outage. It once happened to me. I was going to download something I had on my cloud storage service, but I couldn't because it was out of service I guess. There's also the risk of hacking and getting your data stolen. Another common problem is when there is data loss and the recovery tools are not adequate. Actually, I was going to ask you about that. Is there any insurance coverage on data loss or theft?

Professor: Insurers, cloud providers and cloud users are now starting to realize how important it is to have clearer terms about insurance options. Most cyber insurance policies exclude loss of data in cloud-related events. In the past, if you were going to claim for losses because of a cloud outage, this claim wouldn't fit into the insured's policies.

Sarah: All things considered, I guess insurance companies are now offering cloud-related products, am I right?

Professor: Yes. Some specific cloud insurance policies are now providing coverage against liability claims for data loss and outages. Additionally, they are covering the costs of technical issues, data restoration and back up services due to outages.

Sarah: Is the loss of data due to hacking covered by these new insurance policies?

Professor: Yes. There are emerging products with coverage for loss of income because of an outage and losses incurred for the leakage of sensitive information due to a security breach or hacking.

Sarah: Thanks, professor. You've been enlightening.

Let's Practice!

The importance of insurance

Instructions: Select the correct answer to complete the sentences.

1. I _____ download some files I needed, but the cloud server went down permanently.
a. were going to b. was going to c. am going d. are going to
2. I never thought I _____ need insurance, but I was wrong.
a. will b. had c. was going to d. were going to
3. No one believed that we _____ rely on the internet for so many things.
a. were going to b. are going to c. was going to d. is going to
4. Many companies _____ to assume the risk of losing data, so cloud service insurance policies were created.
a. are not going b. was going c. were not going d. is going
5. The new services were going _____ receiving users last month, but due to a lack of insurance coverage, it was not possible.
a. start b. starting c. started d. to start

Let's Practice!

Many things can go wrong with a cloud computing service.

Instructions: Proofread the sentences. Correct the mistakes.

1. Cloud computing services are quickly become in the standard norm in software development.
2. New companies art relying more on virtual cloud applications than physical infrastructure.
3. Next Monday, the new CEO was giving a talk on insurance coverage for cloud service outages.
4. Users cannot access the platform right now. The cloud is down and we are faced millions in losses.
5. The developers have writing the software script on the cloud platform. I hope the service is insured, or else we risk losing months of work.

Extension Activity

Finding the best insurance!

Instructions: Complete the following steps. Fill in the Self-Assessment.

- Find information about two different companies that provide cloud services insurance.
- Analyze the coverage of both of them.
- Make a chart comparing the pros and cons of each company.
- Present your work with your partners.

Self-Assessment

Yes

No

- | | | |
|---|-----------------------|-----------------------|
| 1. I find information about two different companies that provide cloud services insurances. | ☐ | ☐ |
| 2. I analyze the coverage of both of them. | ☐ | ☐ |
| 3. I make a chart comparing the pros and cons of each company. | ☐ | ☐ |
| 4. I present my work to my partners. | ☐ | ☐ |

Target Words

- increasingly** (adverb): progressively moving to a higher degree.
e.g. Nowadays, cloud services are becoming increasingly popular in businesses due to the massive cost savings in hardware.
- go wrong** (expression): if something goes wrong, there are problems or mistakes as a result.
e.g. There are, however, many things that can go wrong with cloud computing services. Sarah, can you mention any of them?
- out of service** (expression): something that is not operating at the moment.
e.g. I was going to download something I had on my cloud storage service, but I couldn't because it was out of service I guess.
- insured** (noun): person or object covered by insurance.
e.g. In the past, if you were going to claim for losses because of a cloud outage, this claim wouldn't fit into the insured's policies.
- coverage** (noun): the reach and extent of an insurance policy.
e.g. Some specific cloud insurance policies are now providing coverage against liability claims for data loss and outages.
- enlightening** (adjective): giving a deep and clarifying explanation of something.
e.g. Thanks, professor. You've been enlightening.

Learning Points

Was/Were Going To for Unfulfilled Events

When we want to talk about plans that we made, but didn't happen, we can use **be going to** in the past.

Use **was/were going to** when talking about events that were planned, but actually did not happen.

Look at the structure:

Subject + **was / were** + **going to** + base form of the verb

Examples:

*I **was going to** do some research on insurance plans for cloud services, but I didn't find much information about it.*

*I **was going to** ask for cloud computing services protection, but the insurer told me they didn't offer specific policies for my needs.*

Examples

- *I was going to download something I had on my cloud storage service, but I couldn't because it was out of service I guess.*
- *In the past, if you were going to claim for losses because of a cloud outage, this claim wouldn't fit into the insured's policies.*

Things that Can go Wrong in Cloud Computing

As in any computing service, many things can go wrong in **cloud services**. Here, we list the most common issues:

- Interruption of service because of a cloud outage.
- Interruption of services because of a programmed maintenance.
- User erasing data by mistake.
- User being unable to access data from a non-predetermined location.
- Loss of data due to a cloud disaster and data recovery is unsuccessful.
- Loss of data due to lack of back up.
- Cloud serves being hacked into and data being stolen.
- Contract agreement disputes in which data gets locked in.
- Cloud provider going down permanently.
