Let's Start!

Different cloud computing services

Cloud Computing Services

Learning Outcome:

Understand information about people's backgrounds in spoken or written documents.

Interpret the IT needs assessment, to determine the required technology to manage information, according to the rules and protocols established by the company.

Ask your partner:

- What do you think are the main differences between paid and free clouding services?
- Do you think cloud computing services are as safe as traditional services? Why?

Can Do Statements:

- I can talk about the differences between paid and free clouding services.
- I can discuss how cloud computing service contracts differ from a traditional software purchase.
- I can talk about practical and contractual assurances to keep the security and privacy of a customer's data.

Let's Explore!

Mark and Walter discuss how they are going to approach cloud services proposals.

Instructions: Read the text below.

Mark: Have we received any interesting proposals from cloud services vendors?

Walter: We have. Actually, the proposal submission deadline was supposed to be yesterday.

Mark: Good! How do you think these proposals can be approached?

Walter: It depends on if it's a paid, a free, or a low-cost cloud service. We should consider if free cloud services that can be offered to thousands of users fit better than cloud services which are tailored to a few customers. Moreover, paid cloud services vendors provide customized services, a 24/7 customer service, and avoid an outage at all costs. Also, now paid cloud contracts are open for negotiation. A few years ago, you were supposed to just accept the terms.

Mark: Good observation. Now, how do cloud computing service contracts differ from a traditional software purchase?

Walter: In the past, you were supposed to be granted a software license. Now, the software code belongs to the cloud vendor, so there's no clause stating "vendor hereby grants a license to a customer to copy and use the software" as in a traditional contract. Additionally, in the traditional software model, the client pays upfront for an everlasting license, whereas a cloud service is a time-based subscription that can be ended according to the customer's satisfaction.

Mark: How will the security and privacy of our data be kept in cloud computer services?

Walter: Cloud vendors probably won't guarantee data security for the price of a subscription, but they do offer practical and contractual assurances. They would somehow state their reasonable determination and efforts to protect customers' data. In addition, there should be contractual statements on how the vendor is expected to manage the data and the retrieval of data upon termination of the contract by the customer.

Let's Practice!

Cloud computing service now differs from traditional software purchase in the past.

Instructions: Proofread the sentences. Correct the mistakes. Check your pronunciation with your instructor.

1. In the past, paid cloud contracts had a disadvantage; you (was / were) supposed to just sign without negotiating the terms.
2. Now, the software code belongs to the cloud vendor, so there's no stating clause like it (were / was) supposed to be in the past.
3. In the traditional software purchase, the client (were / was) not supposed to enjoy the same benefits they do now.
4. In the past, you (was / were) supposed to agree with the vendors conditions without having the opportunity to negotiate them.

Let's Practice!

Considerations on Free and Paid Cloud Services

Instructions: Select the correct answer in order to complete the sentence.

1. There are free cloud services that _____ to thousands of users.
a. can present b. be presented c. can be presented d. be
2. There are paid cloud services that _____ to a few costumers.
a. can be personalized b. can be personalizes c. can personalize d. was
3. Paid cloud contracts _____ for negotiation now, different from the situation some years ago.
a. can opened b. can open c. can be opened d. is
4. In the traditional software model, a subscription _____ depending on the customer's satisfaction.
a. can be ended b. can ended c. ended d. ends
5. A cloud service _____ over the internet.
a. provides b. is provide c. is provided d. provides
6. There are several cloud services which _____ to a few costumers.
a. are tailored b. is tailored c. tailored d. tailors

Extension Activity

Recognizing advantages and disadvantages of Cloud Computing Services.

Instructions: Complete the following steps. Fill in the Self-Assessment.

- Make a broader research about cloud computing services.
- Discuss with a partner your findings and from your experience using cloud services. What advantages and disadvantages do you find from this service?
- Write a 250 words report expressing your final thoughts and mentioning at least three advantages and disadvantages of cloud services.

Self-Assessment

Yes

No

- I define cloud computing services. ☐ ☐
- I summarize ideas with a partner about cloud services pros and cons. ☐ ☐
- I produce a text expressing my final thoughts about the topic for discussion. ☐ ☐

Target Words

- **submission** (noun): something which is offered so that it can be chosen.
e.g. Actually, the proposal submission deadline was supposed to be yesterday.
- **fit** (verb): to adapt properly.
e.g. We should consider if free cloud services that can be offered to thousands of users fit better than cloud services which are tailored to a few customers.
- **moreover** (adverb): in addition.
e.g. Moreover, paid cloud services vendors provide customized services, a 24/7 customer service, and avoid an outage at all costs.
- **differ**(verb): to be different.
e.g. Now, how do cloud computing service contracts differ from a traditional software purchase?
- **grant**(verb): to agree to give.
e.g. In the past, you were supposed to be granted a software license.
- **everlasting** (adjective): something that lasts forever, or for a long time.
e.g. In the traditional software model, the client pays upfront for an everlasting license.

Learning Points

Was/were supposed to

In order to express an assumption in the past, we can use the structure **was/were supposed to**.

When we talk about things that should have happened in the past or should have been done, we can use **be supposed to** in its past form. We use it to say that something was expected to happen but never did.

Subject + was/were + supposed to + verb base form + complement

- *Both parties **were supposed to come** to an agreement, but finally they didn't.*

Examples

- *Actually, the proposal submission deadline was supposed to be yesterday.*
- *A few years ago, you were supposed to just accept the terms.*
- *In the past, you were supposed to be granted a software license.*

Passive of modal verbs, can

We use the **passive voice** when we want to give importance to the object of a sentence or when the subject is unknown or not important.

We can use the passive voice with the modal verb **can** to talk about present ability or possibility. Its doer is unknown or is not important.

To make the passive with **can**, the **to be** verb is used in its base form, followed by the main verb in its past participle form:

- *Specific conditions **can be laid out** in a contract proposal before both parties start to negotiate.*

Examples

- *How do you think these proposals can be approached?*
- *We should consider if free cloud services that can be offered to thousands of users fit better than cloud services which are tailored to a few customers.*
- *A cloud service is a time-based subscription that can be ended according to the customer's satisfaction.*
